Excellence through innovation, education, and creative stretch packaging solutions.

Product Catalogue

Our salespeople are a seasoned group, and several of them have extensive stretch wrapping knowledge. All consumer criteria won't be satisfied by a single product type or innovation. Due to our expertise and experience, we can properly explain the benefits of these goods as well as the appropriate approach for a certain application. By using a personalized approach, we ensure that each of our customers receives the ideal product and consistently complies with industry best practices.

To assist clients in reducing their extra film, we have a proactive environmental approach with definite goals. Customers are frequently unaware of how simple it is to use less film by following the right instructions. Our emphasis on applying the least quantity of stretch film possible is a crucial component of our service. Over the years, we have established strong bonds with our foreign supply partners, which enables us to promise films that are dependable, consistent, and high-performing.

The leading stretch film manufacturer

Best Stretch Film Company With More Than 10 Years Experience

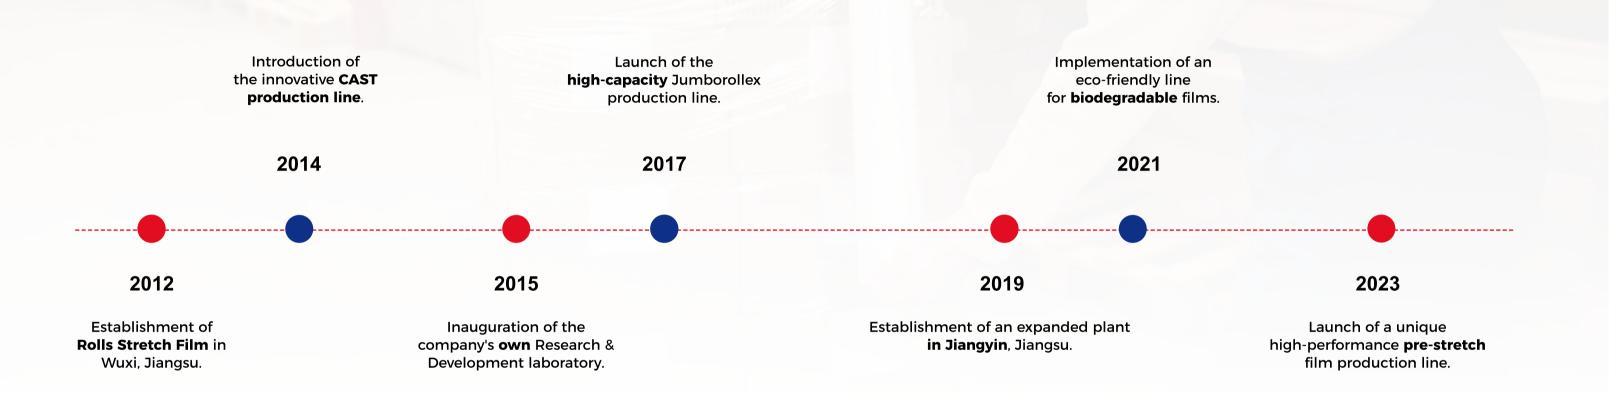

Rolls stretch film Limited, objective is to produce and offer the best stretch films in the domestic and international markets. Our superiority is guaranteed by modern automated palletizing and packaging systems built on cutting-edge technology, a knowledgeable team of specialists and engineers, and devoted, cutting-edge stretch film production lines.

Company history

Stretch films make excellent shipping packaging because they are durable, sticky, and elastic. Our products protect loads from mechanical and weather-related damage.

We, Rolls stretch film Limited, manual packaging films for machines as well as arm and plate wrapper films. Stretch films come in colored or translucent varieties, allowing you to conceal the contents of the cargo.

With the help of advances in stretch film technology, we can produce products that are more specialized to the preferences of the consumer.

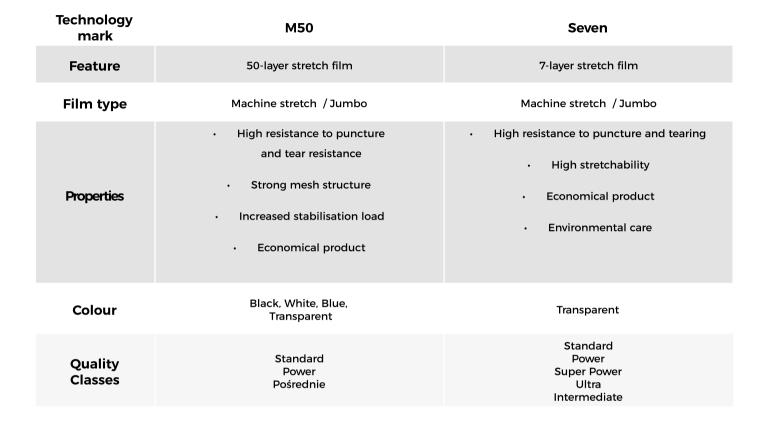

Technologies and refinements

Production technologies

Advanced machinery and many years of experience in the production of stretch film allow us to offer technologies that are unheard-of by other manufacturers. These are innovative solutions dedicated to specific types of film.

The availability of a particular technology must be confirmed directly with the Customer Service Department.

Technology mark	E7	Efekt Stretch Plus
Feature	7-layer environmental film	5-layer stretch film
Film type	Hand stretch / Machine stretch / Jumbo	Machine stretch / Jumbo
Properties	 High resistance to puncture and tear resistance Use of up to 30% regranulate during production Economical product 	 High resistance to puncture and tear resistance High stretchability Economical product
Colour	Transparent	Transparent
Quality Classes	Standard Power Intermediate	Standard

Available refinements

For customers requiring additional product options, we have prepared refinements:

OSC (High Slip)

Slippery films dedicated to the close storage of products. Prevents the phenomenon of "pallet sticking".

Frozen

Films resistant to low temperatures.

Food

Food safe films that may come into direct contact with it.

UV

The material shows increased resistance to UV radiation.

High Cling

Increased stickiness of the film, a solution dedicated to confectioners.

Product masking

The coloured films effectively conceal the contents of the cargo.

Hand-use Stretch Film

Hand stretch wrap is an incredibly versatile and cost-effective packaging material.

It can be used to secure a variety of objects such as boxes, pallets, and furniture.

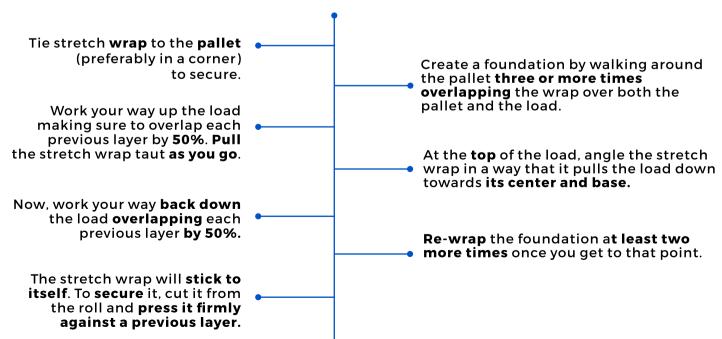

It is made from **plastic film** that has been stretched around the object, providing a strong bond that helps **protect items** from dust, moisture, pressure, and other environmental elements.

How to use Hand Stretch Film?

Handle Stretch Film-Mini

Mini stretch film is an effective packaging solution that offers maximum protection while utilizing **minimal** packaging material.

The thin, lightweight plastic film provides superior strength and clarity, making it ideal for bundling boxes, shrink-wrapping products, and unitizing loads.

Material	LLDPE	
Thickness	10mic-40mic	
Width	5-15cm	
Paper Core	2"/ 3"	
Weight	0.3-2kg	
Packing	48 rolls /ctn	

Comparison of Mini Stretch Film with Standard Stretch Film

Property	Mini Stretch Film	Standard Stretch Film	
Thickness 8-15 microns		15-30 microns	
Roll Width	50-150 mm	300-500 mm	
Stretchability Up to 150%		Up to 300%	
Load Capacity	Up to 500 kg	Up to 2000 kg	
Core Diameter	1-1.5 inches	2-3 inches	
Applications	Wrapping smaller and lighter loads, such as boxes and cartons.	Wrapping larger and heavier loads, such as pallets and machinery.	
Advantages	Cost-effective, lightweight, easy to handle, and ideal for small scale operations.	Offers greater load stability, improved puncture resistance, and better cling performance.	

Recommended Mini Stretch Film Usage

Load Type	Mini Stretch Film Specification	
Boxes/Cartons	8-10 microns thickness, 50-100 mm width, up to 100% stretchability	
Palletized Goods	lletized Goods 12-15 microns thickness, 100-150 mm width, up to 150% stretchability	
Irregularly Shaped Items	10-12 microns thickness, 80-120 mm width, up to 120% stretchability	
Temperature Sensitive Items	15 microns thickness, 100-150 mm width, up to 150% stretchability, UV resistant, and suitable for refrigerated storage.	
Hazardous Materials	12-15 microns thickness, 100-150 mm width, up to 150% stretchability, puncture-resistant, and suitable for hazardous materials transportation.	

The **colored stretch film** provides an economical and efficient way to secure, protect and identify products.

The colored film is available in various colors such as **black**, **yellow**, and **red** which helps **differentiate products** for quick **identification**.

The colored stretch films also provide tamper **evidence** with the added benefit of **being visually appealing**.

As compared to other forms of packaging materials like paper or cardboard, colored stretch films are more **durable** and offer better protection **against water**, **humidity**, and **contamination**.

Material	LLDPE	
Thickness	10mic-40mic	
Width	50cm, customized	
Paper Core	2"/ 3"	
Weight	2-20kg	
Packing	1 / 4 / 6 rolls /ctn

*Standard Sizes Of Color Stretch Film

Bundling stretch film is a versatile and cost-effective product used to package products of any shape or size. It is often used in combination with shrink wrap or vacuum sealers to provide an extra layer of protection and security.

Bundling stretch film can be made from a variety of materials such as **polyethylene**, **polypropylene**, **vinyl**, **nylon**, **and others**. This type of packaging is widely used across industries and applications including **food**, **pharmaceuticals**, **consumer goods**, **and retail items**.

Its **low cost** makes it a cost-effective solution; and its **lightweight** design allows for easy storage, transportation, and application. Additionally, it is available in a variety of **sizes** and **colors** to meet the needs of any packaging project.

Bundling stretch film is an ideal solution for product bundling and **unitizing**. It can be used to package products like paper rolls and other large items together, as well as smaller items such as **water bottles** or **cans**.

Hot Selling Products

Machine Stretch Film

Machine stretch film is an **industrial-grade** plastic wrap that is used to protect and secure items during storage and shipment.

It is designed to be applied using a **dispenser** or **stretch wrapper**, which then stretches the film over the product being wrapped.

Machine stretch film's strong adherence also keeps cargo **safe** from tampering, theft, and pilferage while on the move.

Features ✓ Superior quality stretch flim ✓ Most reasonable Price ✓ Excellent customer service ✓ Worldwide shipping

The Advantages

Product protection ensured

Using the proper stretch wrapping machine will guarantee that your products are tightly wrapped to prevent any possible damage from moisture, dirt, or dust.

Time-saving packaging process

You can save a ton of time by buying a wrapping machine. Pallets, crates, and other merchandise can be laborious and time-consuming to manually wrap.

Lower film costs

Both semiautomatic and automated stretch wrapping machines will save your company money on expensive film prices as compared to hand wrapping.

Streamlined PLC-controlled machines

An automatic stretch wrapping machine with a PLC control can assist your company to fulfill its bulk packaging needs by streamlining the packaging process.

Consistent, effective wrapping guaranteed

By utilizing a stretch wrapping system for all of your bulk packaging needs, you can be sure that your items are consistently wrapped with the same stretch and effectiveness.

Enhanced efficiency with autonomous equipment

Your company will move toward efficiency and enhance output with autonomous stretch-wrapping equipment.

Jumbo roll stretch film is an **industrial-strength** plastic product used to wrap.It is made from **polyethylene (PE)**, which has a **high molecular** weight that increases the force required to **tear** or **puncture** it.

It also has excellent **self-adhering** properties, meaning it will **stay** securely **in** place without having to use additional adhesives.

It can be used to wrap palletized items, secure loose bundles of material, or even as a **protective** covering for construction projects.

Its elasticity gives it the ability to stretch up to **250**%, allowing you to cover more area with less film. This **save**s time and money in labor costs, as well as **reduces wastage** from having to cut unnecessary pieces of stretch film.

Jumbo roll stretch film is a great **alternative** to **traditional box taping** and **strapping methods**. Additionally, it can often be **recycled**, making it an **eco-friendly** packing solution.

Printed stretch film features high elasticity, transparency, and printability that make it ideal for product identification and branding.

The film can be used to secure goods or bundles during storage or transportation while providing an opportunity to advertise the product with printed information, logos, barcodes, etc.

Printed stretch film is used in many industries such as food, pharmaceuticals, chemical products. electronics. and more.

It offers excellent protection against dust and moisture while allowing users to quickly identify the contents inside the package. Additionally, this type of wrap allows for easy opening due to its tearresistance properties.

This makes it a popular choice among businesses that want maximum efficiency when packaging items such as pallets of goods.

Pre-stretched film is made of polypropylene, polyethylene, or PVC, which are all strong and stretchable materials.

For example, it can be used as shrink wrap for items such as furniture and machine parts that need to be protected from dust and moisture during transit.

The pre-stretched film can also act as a barrier between products while they are stored in boxes or on shelves, helping to prevent damage and contamination.

Additionally, the pre-stretch film can be used to bundle items together for ease of handling, saving time, and reducing waste during the packaging process.

In any of these applications, it is strong enough to provide the necessary protection without being overly bulky or heavy, which can make it an ideal choice for many businesses.

Stretch food film Foodsafe+

The foodsafe+ stretch film is suitable for direct contact with foodstuffs. As a manufacturer of food film, the product parameters are supported by an appropriate certificate and declaration of conformity.

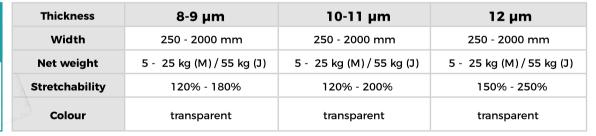

Foodsafe+ is available as manual stretch film, machine stretch film and jumbo stretch film, in transparent colour.

Features Foodsafe+ can be produced with enhancements - e.g. High Cling or Frozen, thus demonstrating increased adhesiveness or resistance to sub-zero temperatures. The foodsafe+ food film will protect any food product: meat, fish, cold cuts, fruit, vegetables, dairy products.

Rolls **Biodegradable Stretch Film** Manufacturer uses the latest technology to produce **sustainable**, **recyclable** products.

Every product we produce meets and exceeds industry **standards for biodegradability**, helping to reduce waste and emissions.

Our stretch films have been tested and certified by **ASTM International** (an independent testing organization) as being **free of harmful chemicals** or toxins, making them a safe choice for those looking for an eco-friendly option.

PHA Biodegradable Stretch Film is a product that provides the same performance and strength as traditional stretch film, but with a greater environmental impact.

The film is made from **polyhydroxyalkanoate** (**PHA**), a biopolymer derived from organic sources such as **vegetable oils** and **plant-based starches**.

Unlike other traditional plastic products, **PHA** Biodegradable Stretch Film is fully biodegradable and compostable, breaking down into harmless components such as **water** and **carbon dioxide**.

PLA biodegradable stretch film is a revolutionary product that is changing the way we package goods.

It's made from **Polylactic Acid (PLA)**, which is derived from **plants** and **vegetable matter**, making it much **more eco-friendly** than traditional forms of plastic packaging.

Unlike other types of stretch film, **PLA** biodegradable stretch film will **degrade in** a matter of months, making it ideal for those looking to **reduce their plastic waste**.

Corn Starch Biodegradable stretch film is a revolutionary product that is more environmentally friendly and offers superior performance compared to traditional stretch films.

This type of film is made from **biodegradable cornstarch resin**, **breaking down** faster than conventional plastic materials.

It is strong and versatile and can be used for packaging and wrapping goods.

It is also **UV stabilized**, meaning it can be used outdoors for extended periods **without** becoming brittle **or** discolored.

ASTM D6400 and **ASTM 6954** are standards for biodegradable stretch films, which are plastic films that can be stretched to wrap around various items.

These films are made from **polylactic acid (PLA)** or other bioplastics, such as **polyhydroxyalkanoates (PHA)**, **starch**, **cellulose**, and **polyhydroxy butyrate (PHB)**.

These films are designed to degrade in a **composting** environment, breaking down into natural components.

A plastic Pallet Cover is a lightweight, durable cover used to protect goods stored on pallets.

It is made from **high-quality polyethylene** or **polypropylene** and features an **anti-slip surface**, ensuring that the items remain safely in place during transport.

The cover also helps to prevent dust, moisture, mold growth, and contamination of materials, making it ideal for **storing sensitive bulk items**.

Plastic Pallet Covers can be used with both open and closed deck pallets and come in various sizes to suit different needs.

They are commonly found in warehouses, factories, and distribution centers for the storage of goods such as food products, pharmaceuticals, chemicals, and other hazardous materials.

Electrical Wire Film (EWF) is a type of **insulation** material used to protect **wires** and **cables** from the elements, such as extreme temperatures, moisture, dust, and abrasion.

This specially designed film is resistant to breakdowns caused by Electro-Magnetic Interference (EMI).

EWF typically consists of **polyethylene** or **fluorinated ethylene-propylene** (**FEP**) with an adhesive backing for easy application.

The main purpose of **EWF** is to ensure that electrical energy flows **safely** and efficiently throughout a system **without interference** from external conditions.

To achieve this, it must be applied carefully to properly insulate each wire or cable **against heat transfer**, **shock resistance**, **corrosion**, and **conductivity loss**.

Silage film

Description: It can alleviate the problem of feed shortage in autumn and winter seasons. Convenientstorage and material retrieval, unaffected by seasons, tanning, rainfall, and groundwater. It can be stacked outdoors for easy transportation and commercialization, improving the utilization rate of feed

Application: Suitable for storage and feed packaging of various agricultural products in aquaculture and animal husbandry

Characteristics: No burrs, scratches, toughness, and customizable specifications

Penetrated Breathable Stretch Film

Description: The surface has fishing mesh breathing holes, which can accelerate air circulation. It is light, has good elasticity, and has a breathability rate of 80%.

Application: Food and beverage, pharmaceutical products, agricultural product markets, flower and horticulture markets, etc

Characteristics: Strengthen breathability and reduce product deteriorationor packaging damage

Hand-Use										
Length	Width	Average Thickness	Prestretch	Elongation at break	Tensile stress at break	Number of holes per row	Weight per meter	Weight per		
500m	420mm	8um	30%	35%	30kg	13	2.25g	1.4kg		
Machine-Use										
Length	Width	Average Thickness	Prestretch	Elongation at break	Tensile stress at break	Number of holes per row	Weight per meter	Weight per		
1420m	500mm	23um	250%	250%	26kg	13	7.8g	11kg

Why insist on own land, self-built factory?

No high rent and non-standard production, greatly reduce the cost of products, all factories arein line with local laws and regulations, high standards of production, factory direct sales, removeintermediate costs.

Why use imported equipment to produce and inspect products?

Germany WH, Austria SML, Italy AMUT casting machine, nanotechnology, excellent physical properties, high output automation, Italy ESTL Dynamic detection, quality traceable throughout.

Why is our supply of raw materials stable and low?

Signing direct sales contracts with petrochemical plants, using a variety of hedging and othercurrent tools, to buy high-quality raw materials from overseas.

Why do we always insist on producing green and environmentally friendly 100% recyclable products?

Sustainable development is our philosophy, We have passed Rosh, Reach, halogen FDA and other standards, increased packaging recyclability, and used more recycled materials, bio-based and degradable materials
